7:30 am - 9:30 am

### Eaton Corporation

13039 Crossroads Parkway South  
City of Industry, CA

### John Jansen

*Applications Engineer*

Eaton Corporation - Electrical Americas

### Beyond Commissioning: Optimizing Electrical Systems

Testing, Start-up, Maintenance, NFPA, Life Extension

The goal of the presentation is to help facility personnel better understand that the power source for a hospital is critical in providing patient care. The presentation will focus on critical infrastructure, regulations, codes and standards. The presentation also focuses on some definitions around start-up and commissioning, acceptance testing and preventive maintenance; and examines arc flash requirements along with the importance of conducting an arc flash study. The final portion of the presentation covers equipment life extension concepts for aging infrastructures along with areas that can improve a facility's safety program through the use of new technology to protect site personnel.
